This standard was developed by a consensus standards development process which has been accredited by the American National Standards Institute (ANSI). Accreditation by ANSI, a voluntary accreditation body representing public and private sector standards development organizations in the United States and abroad, signifies that the standards development process used by ASCE has met the ANSI requirements for openness, balance, consensus, and due process.

While ASCE's process is designed to promote standards that reflect a fair and reasoned consensus among all interested participants, while preserving the public health, safety, and welfare that is paramount to its mission, it has not made an independent assessment of and does not warrant the accuracy, completeness, suitability, or utility of any information, apparatus, product, or process discussed herein. ASCE does not intend, nor should anyone interpret, ASCE's standards to replace the sound judgment of a competent professional, having knowledge and experience in the appropriate field(s) of practice, nor to substitute for the standard of care required of such professionals in interpreting and applying the contents of this standard.

ASCE has no authority to enforce compliance with its standards and does not undertake to certify products for compliance or to render any professional services to any person or entity.

ASCE disclaims any and all liability for any personal injury, property damage, financial loss, or other damages of any nature whatsoever, including without limitation any direct, indirect, special, exemplary, or consequential damages, resulting from any person's use of, or reliance on, this standard. Any individual who relies on this standard assumes full responsibility for such use.

ASCE STANDARDS

In 2016, the Board of Direction approved revisions to the ASCE Rules for Standards Committees to govern the writing and maintenance of standards developed by ASCE. All such standards are developed by a consensus standards process managed by the ASCE Codes and Standards Committee. The consensus process includes balloting by a balanced standards committee and reviewing during a public comment period. All standards are updated or reaffirmed by the same process every five or six years. Requests for formal interpretations shall be processed in accordance with Section 7 of ASCE Rules for Standards Committees, which are available at www.asce.org. Errata, addenda, supplements, and interpretations, if any, for this standard can also be

found at www.asce.org. This standard has been prepared in accordance with recognized engineering principles and should not be used without the user's competent knowledge for a given application. The publication of this standard by ASCE is not intended to warrant that the information contained therein is suitable for any general or specific use, and ASCE takes no position respecting the validity of patent rights. The user is advised that the determination of patent rights or risk of infringement is entirely their own responsibility. A complete list of currently available standards is available in the ASCE Library (<https://ascelibrary.org/>).

Tips for Using This Standard

The **standard provisions** are contained in Chapters 1 to 32. Standard provisions are mandatory.

CHAPTER 8 RAIN LOADS

The **standard commentary** is contained in Chapters C1 to C32. Standard commentary is intended to help you understand how the provisions were determined and how to apply them.

Gray bars down the side in the provisions (but not the commentary) indicate sections with substantive changes from the previous editions of this standard, ASCE 7-16.

Referenced consensus standards are listed at the end of each chapter of provisions, where they are listed by number with title, publisher, year of publication (and the sections that cite them). In text, they are mentioned only by number: *AASHTO LRFD Bridge Design Specifications*, ASME A17.1.

4.17 CONSENSUS STANDARDS AND OTHER REFERENCED DOCUMENTS

This section lists the consensus standards and other documents that shall be considered part of this standard to the extent referenced in this chapter.

AASHTO LRFD Bridge Design Specifications, 7th ed., American Association of State Highway and Transportation Officials, 2014, with 2015 interim revisions.

Cited in: Sections 4.5.3, 4.10.2, and 4.10.4

ASME A17.1, *Safety Code for Elevators and Escalators*, American Society of Mechanical Engineers, 2016.

Cited in: Section 4.6.2

Equation (8.2-1). The hydraulic head shall be based on hydraulic test data or hydraulic calculations, assuming a free surface flow corresponding to a rainfall intensity equal to or greater than the 15 min duration storm with return period (frequency) given in Table 8.2-1. The ponding head shall be based on structural analysis as the depth of water caused by deflections of the roof subjected to unfactored rain load and unfactored dead load.

$$R = 5.2(d_s + d_h + d_p) \quad (8.2-1)$$

$$R = 0.0098(d_s + d_h + d_p) \quad (8.2-1.SI)$$

8.3 BAYS WITH LOW SLOPE

Free-draining bays and internal bays not accumulated rain load required by Section 8.2.1 shall have adequate strength and stiffness to preclude progressive deflection (i.e., instability) and resist potential ponding.

This standard uses both customary and metric (SI) units.

Customary units appear first, followed by SI units in parentheses. When numbered display equations have customary and SI versions, the one in customary units is numbered like this: (Equation 8.2-1). The one in SI units is numbered like this: (Equation 8.2-1.SI).

Reference citations are listed at the end of each chapter of commentary, where they are listed by author and date with accompanying bibliographic information. In the text, these references are called out by author and date: Baber and Rigsbee (2010); Bodhaine (1968); and Carter (1957).

Complete hazard data in ASCE 7-22 is provided free to the user in the ASCE 7 Hazard Tool (<https://asce7hazardtool.online/>). See next page for more details.

Supplements, errata, and interpretations may become available in the future.

Please check for important new materials at <https://doi.org/10.1061/97870784415788>.

Tips for Using the ASCE 7 Hazard Tool

asce7hazardtool.online

The ASCE 7 Hazard Tool provides access to the digital data defined in the hazard Geodatabases required by this standard. The digital data required for snow, seismic, and tornado are available at <https://asce7hazardtool.online/>, and digital data is available for flood, rain, ice, and wind, as well. Digital data required for tsunami is available at <https://asce7tsunami.online/>.

The screenshot shows the ASCE 7 Hazard Tool interface. On the left, a sidebar contains input fields for Location (San Francisco, California), Elevation (60 ft), Lat (37.77712), Long (-122.41964), Standard (ASCE/SEI 7-22), Risk Category (I), and Soil Class (Default). Below these are buttons for 'FULL REPORT' and 'SUMMARY'. A red circle with an arrow points to the 'Location' field, labeled 'User input location'. Another red circle with an arrow points to the 'Risk Category' and 'Soil Class' fields, labeled 'User input Risk Category and Soil Class'. A third red circle with an arrow points to the 'FULL REPORT' and 'SUMMARY' buttons, labeled 'Hazard specific Details, Summary, and Full Report provided'. The main panel displays 'Seismic Details' for Risk Category I, showing a table of seismic coefficients (S_S, S_I, S_{MS}, S_{MI}, S_{DS}, S_{D1}, T_L, PGA_M, V_{S30}) and two graphs: 'Multi-Period Design Spectrum' and 'Multi-Period MCE_R Spectrum'. A map of San Francisco is visible on the right.

Digital Data

The ASCE 7 Hazard Tool provides digital data required by ASCE 7-22:

- Ch. 5 Flood: Flood zone and static base flood elevation, plus direct links to additional information
- Ch. 6 Tsunami: Whether the site is in a mapped tsunami design zone per the ASCE Tsunami Design Geodatabase, and link to ASCE Tsunami Design Geodatabase if required for design
- Ch. 7 Snow: Ground snow load and winter wind parameter
- Ch. 8 Rain: Median 15-minute and 60-minute duration rainfall intensities for 100-year mean recurrence interval
- Ch. 10 Ice: Radial ice thickness with concurrent 3-second gust speeds and temperature concurrent with ice thickness due to freezing rain
- Ch. 22 Seismic: Seismic coefficients S_S , S_I , S_{MS} , S_{MI} , S_{DS} , S_{D1} , T_L , PGA_M , and V_{S30} , plus the seismic design category, as well as the multi-period spectrum, the multi-period MCE_R spectrum, the two-period design spectrum, and the two-period MCE_R spectrum
- Ch. 26 Wind: Three-second gust wind speeds at 33 feet (10 meters) above ground for Exposure Category C, including identification of hurricane-prone and wind-borne debris regions
- Ch. 32 Tornado: Tornado wind speeds for 1,700-, 3,000-, 10,000-, 100,000-, 1,000,000-, and 10,000,000-year MRI, and for 1-, 2,000-, 10,000-, 40,000-, 100,000-, 250,000-, 1,000,000-, and 4,000,000-ft₂ target areas

PREFACE

Prepared by the Minimum Design Loads and Associated Criteria for Buildings and Other Structures Standards Committee of the Codes and Standards Activity Division of the Structural Engineering Institute of ASCE

ASCE/SEI 7-22 Minimum Design Loads and Associated Criteria for Buildings and Other Structures provides the most up-to-date and coordinated loading provisions for general structural design. ASCE 7-22 prescribes design loads for all hazards including dead, live, soil, flood, tsunami, snow, rain, atmospheric ice, seismic, wind, and fire, as well as how to evaluate load combinations. The 2022 edition of ASCE 7, which supersedes ASCE 7-16, coordinates with the most current structural material standards including those from ACI, AISC, AISI, AWC, and TMS.

Significant technical changes include the following:

- General Requirements
 - New target reliability tables for tsunami and extraordinary loads
 - Removal of importance factors for snow and ice due to risk category specific maps being provided
 - Expanded provisions for in situ load testing
- Load Combinations
 - Revised load combinations to reflect changes in snow loads and new tornado loads
 - New alternative method for loads from water in soil
 - Load combinations for flood loads and atmospheric ice are now explicitly written out and numbered for improved reference and clarity
- Dead and Live Loads
 - Reformatted lateral soil loads table for improved clarity
 - New alternative method for loads from water in soil
 - Terminology change from guardrail system to guard system
 - Additions and clarifications to the live load table
 - Updated crane load vertical impact force provisions including the use of bridge crane service classes
 - New provisions for emergency vehicle loads
- Tsunami Loads and Effects
 - Clarification for inundation calculations for overwashed areas
 - Updated data for Hawaii and many populous locations in California, coordinated with the state agencies
 - New provisions for above-ground horizontal pipelines
 - Clarifications and new provisions for debris impact analysis
 - New provisions for loss of foundation strength and scour
- Snow Loads
 - Ground snow loads have been revised to reflect more recent snow load data and reliability-targeted values
 - Method for estimating drifts revised to include a wind parameter
 - A more accurate estimation of the horizontal extent of windward drifts
 - Revised thermal factors to account current trends in roof insulation and venting
- Rain Loads
 - Design rain load revised to explicitly consider a ponding head
 - New commentary for low slope roofs and drainage to existing roofs

- Atmospheric Ice Loads
 - New risk-targeted atmospheric ice load data for the continental United States and Alaska
- Seismic Design
 - Multi-period response spectrum data eliminates need for F_a and F_v coefficients
 - Increase in number of site class definitions
 - Updated provisions for two-stage analysis procedures
 - Updated provisions for calculating torsion impacts, including irregularities (new Torsional Irregularity Ratio (TIR) term) and accidental torsion
 - Updated directional loading provisions
 - Updated analysis procedure selection provisions
 - Updated displacement and drift provisions
 - Updated force equations for nonstructural components
 - New provisions for penthouses and equipment and distribution system support structures
 - New Lateral Force Resisting Systems:
 - Steel and Concrete Coupled Composite Plate Shear Walls
 - Reinforced Concrete Ductile Coupled Shear Walls
 - Cross-laminated Timber Shear Walls
 - Concrete Tabletop Structures
 - New provisions for Rigid Wall, Flexible Diaphragm buildings (big box stores/warehouses)
 - New and updated provisions for supported and interconnected (coupled) nonbuilding structures
- Wind Design
 - Updates to the wind speed maps along hurricane coastline
 - Removal of tabular methods for both the directional and the envelope procedures, and C&C
 - New provisions for MWFRS and C&C of elevated buildings
 - Updated and expanded provisions for roof and ground-mounted solar
 - Updated provisions grouped circular bins and tanks
 - Revisions to the (GC_p) graphs for external pressure coefficients on C&C
 - Updates for wind tunnel testing and adoption of new edition of ASCE 49-22
 - New chapter for tornado provisions
 - New long return period hazard maps for wind and tornado
- Digital Data Available for all Hazards
 - Required to use digital data for tsunami, snow, seismic
 - Provided for flood, rain, ice, wind, tornado

In addition to the technical changes, the 2022 edition of the ASCE 7 provisions are accompanied by a detailed commentary with explanatory and supplementary information developed to assist users of the standard, including design practitioners, building code committees, and regulatory authorities.

ASCE 7 is an integral part of building codes in the United States and around the globe and is adopted by reference into the International Building Code, International Existing Building Code, International Residential Code, and NFPA 5000 Building Construction and Safety Code. Structural engineers, architects, and those engaged in preparing and administering local building codes will find the structural load requirements essential to their practice.

ACKNOWLEDGMENTS

The American Society of Civil Engineers (ASCE) acknowledges the work of the Minimum Design Loads and Associated Criteria for Buildings and Other Structures Standards Committee of the Codes and Standards Activities Division of the Structural Engineering Institute. This group comprises individuals from many backgrounds, including consulting engineering, research, construction industry, education, government, design, and private practice.

This revision of the standard began in 2017 and incorporates information as described in the preface. This standard was prepared through the consensus standards process by balloting in compliance with procedures of ASCE's Codes and Standards Activities Committee. The individuals who serve on the Standards Committee are listed as follows.

ASCE 7-22 Minimum Design Loads and Associated Criteria for Buildings and Other Structures Standards Committees

ASCE 7-22 Main Committee

Voting Members

Ronald O. Hamburger, P.E., S.E., F.SEI *Chair*
James G. Soules, Ph.D., P.E., S.E., P.Eng, F.SEI, F.ASCE,
Vice Chair
J. Benjamin Alper, P.E., S.E., M.ASCE
Russell A. Berkowitz, P.E., S.E., M.ASCE
Hussain Bhatia, Ph.D., P.E., S.E., M.ASCE
Joseph H. Cain, P.E., M.ASCE
Ronald J. Carrington, P.E., M.ASCE
Gary Y. K. Chock, S.E., D.CE, F.SEI, Dist.M.ASCE
Anne D. Cope, Ph.D., P.E., M.ASCE
Daniel T. Cox, Ph.D., A.M.ASCE
Bradford K. Douglas, P.E., M.ASCE
John F. Duntemann, P.E., S.E., F.SEI, M.ASCE
Gary J. Ehrlich, P.E., M.ASCE
Bruce R. Ellingwood, Ph.D., P.E., NAE, F.SEI, Dist.M.ASCE
David A. Fanella, P.E., S.E., F.SEI, F.ASCE
Kellie Farster, P.E., M.ASCE
Ramon E. Gilsanz, P.E., S.E., F.SEI, F.ASCE
Cole Graveen, P.E., S.E., M.ASCE

TC 13: Nonbuilding Structures of ASCE 7-22 Seismic SC

Voting Members

James G. Soules, Ph.D., P.E., S.E., P.Eng, F.SEI, F.ASCE, *Chair*
Victor D. Azzi, Ph.D., P.E., M.ASCE
Vincent Borov, P.E., M.ASCE
Joseph H. Cain, P.E., M.ASCE
Jennifer A. Carey, P.E., M.ASCE
Richard M. Drake, P.E., R.Eng, S.E., M.ASCE
John D. Gillengerten, P.E., S.E., M.ASCE
Kyle D. Harris, P.E., M.ASCE
Ronald W. Haupt, P.E., M.ASCE
Thomas F. Heausler, P.E., S.E., F.SEI, F.ASCE
Brian E. Kehoe, P.E., S.E., F.ASCE
Mehrshad Ketabdar, P.E., S.E., M.ASCE
Hongchun Liu, P.E., M.ASCE
Roy F. Lobo, Ph.D., P.E., M.ASCE
Sanjeev R. Malushte, Ph.D., P.E., F.ASCE
Andrew D. Mitchell, S.E.
Joe Mugford, P.E.
Rudy Mulia, P.E., S.E., M.ASCE

Thomas L. North, P.E., F.ASCE
 Nicholas D. Robinson, A.M.ASCE
 Harold O. Sprague Jr., P.E., F.ASCE
 Casey Stevenson, P.E., M.ASCE
 Reid Strain, P.E., P.Eng, M.ASCE
 Sayed Stoman, Ph.D., P.E., S.E., M.L.S.E., SEI, M.ASCE
 John M. Tehaney, P.E., S.E., M.ASCE
 Eric H. Wey, P.E., S.E., M.ASCE
 Brian D. Wiese, P.E., M.ASCE

Associate Members

Douglas G. Honegger, M.ASCE
 Robert E. Simmons, P.E., A.M.ASCE
 Christos V. Tokas, P.E., S.E., F.SEAOC, C.B.O.

ASCE 7-22 Subcommittee on Wind Loads

Voting Members

Donald R. Scott, P.E., S.E., F.SEI, F.ASCE, *Chair*
 Cherylyn Henry, P.E. F.SEI, M.ASCE, Vice Chair; Chapter 26 Task Committee, Chair
 Connor J. Bruns, S.E., M.ASCE *Secretary*
 Elaine J. Sutley, Ph.D., A.M.ASCE, *Balloteer*
 Gregory T. Holbrook, P.E., M.ASCE, *Historian*
 Melissa D. Burton, Ph.D., P.Eng, M.ASCE, Performance Based Design Task Committee, Vice Chair
 William L. Coulbourne, P.E., F.SEI, F.ASCE, *Chapter 30 Task Committee, Chair*
 Jay H. Crandell, P.E., M.ASCE
 Richard J. Davis, P.E., M.ASCE, *Chapter 29 Task Committee, Chair*
 Roy O. Denoon, Ph.D., M.ASCE
 Bradford K. Douglas, P.E., M.ASCE
 Gary J. Ehrlich, P.E., M.ASCE, Chapter 30 Task Committee, Secretary
 Emily Guglielmo, P.E., S.E., F.SEI, M.ASCE, *Chapter 26 Task Committee, Secretary*
 Michael Hill, P.E., S.E., M.ASCE
 Peter A. Irwin, Ph.D., P.E., P.Eng, F.SEI, F.ASCE
 Gregory A. Kopp, Ph.D., P.E., M.ASCE, *Chapter 31 Task Committee, Chair*
 Bryan K. Lanier, P.E., S.E., M.ASCE
 Russell Larsen, P.E., S.E., M.ASCE, Performance Based Design Task Committee, Chair
 Marc L. Levitan, Ph.D., A.M.ASCE, *Tornado Task Committee, Chair*
 Franklin T. Lombardo, Ph.D., EIT, A.M.ASCE, *Tornado Task Committee, Vice Chair*
 Anthony Lynn Miller, P.E., F.SEI, M.ASCE
 Murray J. Morrison, Ph.D., A.M.ASCE
 Lawrence C. Novak, S.E., F.SEI, M.ASCE
 John W. O'Brien, P.E., S.E., M.ASCE, *Chapter 30 Task Committee, Vice Chair*
 Timothy A. Reinhold, Ph.D., P.E., M.ASCE, *Chapter 28 Task Committee, Chair*
 Randall Shackelford, P.E., M.ASCE, Chapter 28 Task Committee, Secretary
 W. Lee Shoemaker, Ph.D., P.E., F.SEI, F.ASCE, *Chapter 28 Task Committee, Vice Chair*
 Thomas L. Smith, R.A., F.SEI, M.ASCE
 Theodore Stathopoulos, Ph.D., P.E., F.SEI, F.ASCE
 Peter J. Vickery, Ph.D., P.E., F.SEI, F.ASCE, *Chapter 26 Task Committee, Vice Chair*
 Bradley Young, P.E., S.E., M.ASCE, *Chapter 27 Task Committee, Chair*

Emeritus Members

Daryl W. Boggs, P.E., M.ASCE
 Lawrence G. Griffis, P.E., F.SEI, M.ASCE
 Nicholas Isyumov, P.E.
 Ahsan Kareem, Ph.D., NAE, F.EMI, Dist.M.ASCE

Associate Members

Timothy J. Allison, A.M.ASCE
 Heather Anesta, P.E., S.E., M.ASCE
 Maryam Asghari Mooneghi, Ph.D., P.E., M.ASCE
 David Banks, Ph.D., M.ASCE
 Michele Barbato, Ph.D., C.Eng, P.E., F.EMI, F.SEI, F.ASCE
 Kevin N. Borth, P.E., S.E., M.ASCE, Performance Based Design Task Committee, Secretary
 David Bott, P.E., R.A., S.E., M.ASCE
 Christopher L. Bove, P.E., S.E., M.ASCE
 Steven B. Brown, P.E., M.ASCE
 Jason Brown, P.E., S.E., M.ASCE
 Jennifer A. Carey, P.E., M.ASCE
 Jason E. Charalambides, Ph.D., P.E., R.A., M.ASCE. ENV SP
 Finely Charney, Ph.D., P.E., F.ASCE, F.SEI
 Dustin L. Cole, P.E., S.E., P.Eng, M.ASCE
 Anne D. Cope, Ph.D., P.E., M.ASCE
 Mark E. Detwiler, P.E., M.ASCE
 Lakshmana S. Doddipatla, Ph.D., A.M.ASCE, *Chapter 31 Task Committee, Secretary*
 R. Scott Douglas, P.E., S.E., M.ASCE
 John F. Duntemann, P.E., S.E., F.SEI, M.ASCE
 David A. Fanella, P.E., S.E., F.SEI, F.ASCE
 Thomas R. Garriott, P.E., M.ASCE
 Khaled Ghaedi, Ph.D., S.E., A.M.ASCE
 Mehrafarid Ghoreishi, Ph.D., P.E.
 Alex Griffin, P.E., S.E., M.ASCE
 Alan Hahn, P.E., S.E., M.ASCE
 Benchmark H. Harris, P.E.
 Drew C. Hatton, P.E., S.E., M.ASCE
 Michael A. Herring, P.E., M.ASCE
 Joseph R. Hetzel, P.E.
 Daniel P. Hogan II, P.E., S.E., Chapter 27 Task Committee, Secretary
 John D. Hooper, P.E., S.E., NAC, F.SEI, Dist.M.ASCE
 Xiapin Hua, P.E., S.E., M.ASCE
 Anurag Jain, Ph.D., P.E., M.ASCE
 Hongping Jiang, Ph.D., P.E., M.ASCE
 John Judd, M.ASCE
 Ramtin Kargarmoakhar, Ph.D., P.E., M.ASCE
 Eugene Kim, P.E., M.ASCE
 Yoo Jae Kim, Ph.D., P.E., M.ASCE
 Raymond W. Kovachik, P.E., M.ASCE
 James S. Lai, P.E., S.E., F.ASCE
 Darin V. Lasater, P.E., M.ASCE
 Robert S. Lawson, P.E., M.ASCE
 Chris Mader
 Bonnie E. Manley, P.E., F.SEI, M.ASCE
 William H. Martin, P.E., P.Eng., S.E.
 Mehedy Mashnad, Ph.D., P.E.
 Therese P. McAllister, Ph.D., P.E., F.SEI, M.ASCE
 Patrick W. McCarthy, P.E., M.ASCE
 Rudy Mulia, P.E., S.E., M.ASCE
 Joelle K. Nelson, P.E., M.ASCE, Chapter 29 Task Committee, Vice Chair
 Glenn T. Overcash, P.E., M.ASCE
 Long T. Phan, Ph.D., P.E., M.ASCE
 James D. Pimia, P.E., M.ASCE

Mehedi Rashid, P.E., S.E., M.ASCE
Maryam Refan, Ph.D.
Sanaz Saadat, P.E., M.ASCE
Pataya L. Scott, Ph.D., EIT, A.M.ASCE
Jason V. Smart, P.E., M.ASCE
James G. Soules, Ph.D., P.E., S.E., P.Eng, F.SEI, F.ASCE
Seymour M.J. Spence, Ph.D., A.M.ASCE
Thomas Sputo, Ph.D., P.E., F.SEI, F.ASCE
David W. Stermer, P.E., M.ASCE

Stefka I. Vacheva, EIT, A.M.ASCE
Kevin C. Warapius, P.E., M.ASCE
Dennis M. Wilson II, P.E., M.ASCE
Silky S. K. Wong, Ph.D., P.E., S.E., LEED AP, CEng MICE,
M.ASCE

Riku P. Ylipelkonen, A.M.ASCE
Ioannis Zisis, Ph.D., M.ASCE
Ammar Motorwala, P.E., M.ASCE

DEDICATION

Jon A. Peterka, Ph.D., P.E.
May 26, 1941 – May 22, 2019

ASCE 7-22 is dedicated to Dr. Jon A Peterka, P.E., a leader in the development of codes and standards for ASCE who served on the ASCE/SEI 7 Minimum Design Loads and Associated Criteria for Buildings and Other Structures committee for several decades and was relied on for thoughtful guidance as the ASCE 7 wind load provisions evolved. Jon was a pioneer and community pillar of wind engineering. He was instrumental in the writing of the first version of ASCE 49 *Wind Tunnel Testing for Buildings and Other Structures* (and its antecedent, ASCE Manual of Practice 67). This service to our profession was only the tip of the iceberg in his passion for his work. Jon's imprint can be found throughout this standard, certainly in the knowledge and methods he contributed but also in the spirit in which we strive to provide the information necessary to improve the transparency, consistency, and quality of wind load provisions and wind tunnel testing.
